Introduction

Data Notifications are published to communicate advance information about planned changes covering real-time, historical or reference data across all asset classes and exchanges. Data Notifications keep you informed of changes that could affect your business or may require that you take action.

Go to the sections [Quarterly Notifications](#) and [Weekly Notifications](#) in this guide to learn about these subsets of Data Notifications.

This document includes a section that explains how Data Notifications (also known as Content Notifications) are classified, providing the definitions of each aspect of the classification categories.

Data and Product Change Notifications are published online at MyRefinitiv, with a subscription feature that enables you to receive notifications of interest by email.

In MyRefinitiv, you can:

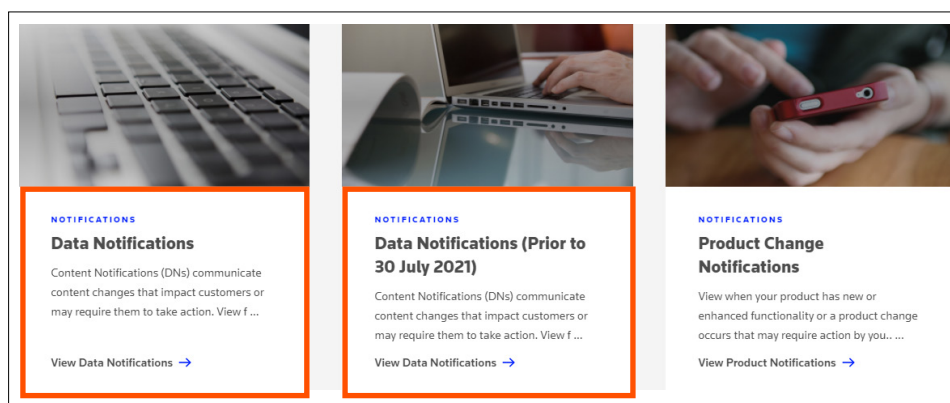

- View and filter notifications in the new and historical formats via separate tiles
- Use filters to save your searches for future use
- Download notifications into Excel® to review, filter or annotate and view notifications in PDF format
- Use the **Version Compare** feature

How to access Data Notifications

To view Data Notifications online, please register or log in at myrefinitiv.com. Once logged in, click **Notifications & Alerts** on the left-hand side menu and click **View Data Notifications**.

To see the latest notifications, click the **Data Notifications** pane. To view previously published notifications, click the **Data notifications (Prior to 30 July 2021)** pane

Hint: You can also enter a **Data Notification** number in the **Search** field (at the top of any MyRefinitiv page) to go straight to a specific notification.

How Filter combination impacts email notifications

When a notification is published, an email is sent to all subscribers whose subscriptions match the classification of the notification.

Read this section carefully before subscribing to emails for both Data and Quarterly Notifications.

When subscribing to Data Notifications and Quarterly Notifications, the selection of a value(s) from each category is read as an 'AND' command. For example, 'Eikon' AND 'Equity' AND 'Real-Time' AND 'Closing Run Change' AND 'Asia' AND 'Tokyo Stock Exchange'.

This design is intended to restrict the volume of notifications an individual receives given the total volume of content change that occurs.

Similarly, a record classified as 'Eikon' and 'Equity' will be sent to subscribers with 'Eikon' and 'Equity' selected. Subscribers whose subscriptions are set to 'Eikon' and 'Fixed Income' won't receive this record as it was classified 'Eikon' and 'Equity'.

The email provides all the information published in the notification with the exception of any documents or URL links. The email will contain information on the effective date, the notification number, the notification title and a summary of the change taking place, its classification details and a link to the record on MyRefinitiv.

Email subscriptions for Data Notifications

You may wish to view the Data Notifications page on a regular basis to keep up to date with pending changes. You also have the option to receive an email when a new notification has been posted or when a revision takes place. To do this, first click the **Filters** icon on the Data Notifications page.

STATUS	EFFECTIVE	ID	TITLE	VERSION	CHANGE TYPE	CONTENT SERVICES
ADV	29 Mar 2021	DN107211	Oslo Bors: Ticker changes for Mowi and Frontline derivatives	1	Name Change	N/A
CAN	18 Apr 2021	DN107434	Change for Chinese Emissions Exchanges data on PointConnect	5	Non-classified / Other change	N/A
ADV	30 Apr 2021 2 May 2021	DN108694	Temporary Discontinuation of Canadian Weekly Natural Gas...	1	Content Removal (No alterna...	N/A
ADV	30 Apr 2021	DN108679	Special calculation regime of Russian money market indicators...	1	Calculation Methodology change	N/A

You will see a list of column filters (you may need to scroll down to view all of them).

STATUS	EFFECTIVE	ID	VERSION	CHANGE TYPE	CONTENT SERVICES
ADV	29 Mar 2021	DN107211	1	Name Change	N/A
CAN	18 Apr 2021	DN107434	5	Non-classified / Other change	N/A

[Clear all](#)
 Save filters

The filters enable you to select and save values, based on the content and change types relevant to you. Filters include Product, Content Set, Change Type and Supplier. Each of these has a sub-item that allows you to specify a more granular subscription.

To learn more, see the section [Definition of Filters](#) in this guide.

Important note when selecting the filter 'Effective Date' for email notifications: This criterion determines for how long you will receive email notifications. For example, if you select the option 'Next quarter', you will receive the notifications only until the next quarter. To continue receiving these emails, either choose a 'Specific Date Range' in the future or do not select any value for this filter.

Once you have made your selections, tick the **Save filters** box and click the **Apply filter** button. A pop-up will display; please enter a name for your filter and click **Save**.

Once saved, click the '**Email Notifications**' link at the top of the page.

Scroll down to see your newly saved filter and switch the toggle button. If your subscription settings match the classification of the data notification, you will receive an email whenever a new, revised or cancelled notification is published.

Note on filter limit: You can create a maximum of nine filters (irrespective of Data or Quarterly notifications). Once you reach this limit, you will need to delete current filters to be able to create new ones.

Other useful notifications

Quarterly Notifications (exchange and third-party data changes)

Quarterly Notifications are a subset of Data Notifications. These provide a summary when there is a commercial impact or content change impacting the commercials of third-party services.

There are two types of changes related to Quarterly Notifications:

1. **Commercial impact only** – Invoices will change in some aspect or if new policies are implemented by the supplier. This type of change includes:
 - Name change of the third-party service(s)
 - Price change for the third-party service(s)
 - Introduction of a new policy:
 - Introduction of a new business policy. For example, introduction of a prior approval process for a supplier
 - Introduction of a new NDU policy or change to an existing NDU policy for a supplier
2. **Content change impacting the commercials of the third-party services** – Typically this means a potential data loss which requires action. Quarterly Notifications help you to understand the content change, assess the impact and take action as defined in these notifications. This type of change includes:
 - **When a service may be withdrawn with a replacement option to order.** You need to determine if the content is important to you and whether you require the replacement option.
 - **When a service may be withdrawn and there is no alternative option.** You'll see an impact on the invoice for the removal of the service and you won't be able to access the data once the notification is effective.
 - **When a service merges with another service.** You need to order the other service to avoid data loss. There may be a price change due to the content moving services. The price change impact may make the service no longer desirable.
 - **When a service splits and new services are required to avoid data loss.** You need to determine which new service you require. There is price/invoice impact based on the combination of services that you need.
 - **When existing free data will become chargeable.** You need to order the new service to avoid data loss. As there will be new fees, you need to determine if the content is required.
 - **When existing free data will become orderable but remains free of charge.** You need to order the new service to avoid data loss if you choose to retain access.

Important note: Whenever there is a new service to order, there could be prior approval requirements from the suppliers before the data can be provided. Please request the service as soon as possible to ensure there is sufficient time to secure the supplier approval.

How to access Quarterly Notifications

To view Quarterly Notifications on MyRefinitiv from the main menu, click **Notifications & Alerts**, scroll down to the section Quarterly Notifications and click **View Quarterly Notifications**.

If you would also like to receive an email when the latest Quarterly Notification is posted to MyRefinitiv, see the section [Email subscriptions for Quarterly Notifications](#) in this guide.

Email subscriptions for Quarterly Notifications

Important note: To receive emails for Quarterly Notifications, you need to create an **additional filter** even if you have already created a filter for Data Notifications.

Refer to the section [How Filter combination impacts email notifications](#) before setting up these email subscriptions.

On the Data Notifications page, first click the **Filters** icon (refer to the section [Definition of Filters](#) in this guide). Select **Yes** in the **Quarterly Notification** field and other relevant filters.

Important note when selecting the filter ‘Effective Date’ for email notifications: This criterion determines for how long you will receive email notifications. For example, if you select the option ‘Next quarter’, you will receive the notifications only until the next quarter. To continue receiving these emails, either choose a ‘Specific Date Range’ in the future or do not select any value for this filter.

Tick the **Save filters** box and click the **Apply filters** button. A pop-up will display; please enter a name for your filter and click **Save**.

Once saved, click the **‘Email Notifications’** link at the top of the **Data Notifications page**. Finally, scroll down to see your newly saved filter and switch the toggle button to enable emails for Quarterly Notifications.

Note on filter limit: You can create a maximum of nine filters (irrespective of Data or Quarterly notifications). Once you reach this limit, you will need to delete current filters to be able to create new ones.

Weekly Notifications

Every Monday morning, a Weekly Notifications Report is posted to MyRefinitiv. This file enables you to quickly see a list of new and revised notifications. It consists of English-language notifications downloaded from MyRefinitiv with a future effective date. The **Review Status** (column B) indicates whether a notification is:

- New: published in the last week
- Notified: previously published
- Revised: updated in the last week

How to access Weekly Notifications

As the reports are sorted by effective date, you may find it useful to see all changes taking place with regards to data (in a given week or month, for example). The report is accessible from the left-hand menu; click **Notifications & Alerts** and **View Weekly Notifications > View Notifications**.

The screenshot displays three notification cards in a row. The first card, titled 'POLICIES Targeted Quarterly Notifications', describes exchange and third-party data changes for the next quarter. The second card, titled 'NOTIFICATIONS Weekly Notifications', is highlighted with an orange border and describes active change notifications for the week. The third card, titled 'NOTIFICATIONS RIC Change Events', describes Reuters Instrument Code (RIC) changes. Each card includes a 'View' button with a right-pointing arrow.

Definition of Filters

Filter	Description
Status	An indication of the degree of certainty and lifecycle state. One of: Advanced Notice, Tentative, Effective On, On Hold or Cancelled. Note: 'Effective On' is the majority condition, so this status is not displayed in the list view in order to make the others more prominent. It can, however, be chosen from the list of filters.
Effective Date	The date on which the change will take effect. There are various options in the filters available to allow you to specify date ranges. Important note: This criterion also determines for how long you will receive email notifications for the various Data Notifications.
ID	The unique notification number prefixed with 'DN'.
Product	The product families and/or products associated with this content change.
Quarterly Notifications	A flag for Data Notifications that have been included in the quarterly changes.
Change type	The type(s) of change that the notification is describing.
Content set	Describes the content types for the content impacted by the change.
Supplier organisation	Describes the parent organisation(s) who supply the content impacted by the change.
Content services	Describes the discrete service(s) being consumed by client who are impacted by this change. A content service consists of data provided by a parent supplier organisation.

Amending your subscriptions

If you need to amend or delete your subscriptions, first click the **Email Subscriptions** link on the Data Notifications page. Next, click the kebab button (the three dots) to edit or delete your previously saved filter. **Subscription changes apply become effective immediately.**

If you do not want to receive emails, you can log in to MyRefinitiv to monitor notifications and switch the email button off. If the round button is on the right, then email notifications are on.

The screenshot shows the 'Data notifications' interface. It lists three notification filters: 'Agriculture and Field FID change', 'Price changes', and 'Policy changes'. Each filter has an 'EMAIL' toggle switch and a kebab menu icon. The 'Price changes' filter is highlighted with an orange box. The kebab menu for the 'Policy changes' filter is also highlighted with an orange box, showing 'Edit' and 'Delete' options.

Notification Filter	Products	Change Type	Status	Email	Actions
Agriculture and Field FID change	(9)	(33)	(1)	On	⋮
Price changes	(9)	(2)	(2)	On	⋮
Policy changes	(9)	(2)	(2)	On	⋮

Downloading notifications

If you prefer to view Data Notifications in Excel® format, you can download any set of search results — simply click **Download**.

The Version Compare feature

This feature enables you to quickly see the difference between the latest published notification and an earlier version of the same notification to determine whether the update is significant and requires action.

To use this feature, open a notification that has been revised and scroll down to the **Versions** tab. Tick the relevant boxes and click the **Compare** button.

The screenshot shows the 'Versions' tab for a notification. It displays a table with columns for 'VERSION', 'DATE', and 'REASON'. Versions 2 and 3 are selected with checkboxes. A 'Compare' button is visible at the bottom right.

VERSION	DATE	REASON
<input type="checkbox"/> 5	02 Jul 2021	Attachments added this time
<input type="checkbox"/> 4	02 Jul 2021	Attachments added
<input checked="" type="checkbox"/> 3	02 Jul 2021	Additional changes as needed
<input checked="" type="checkbox"/> 2	02 Jul 2021	Republishing the DN with add...
<input type="checkbox"/> 1	30 Jun 2021	-

Select 2 versions of this notification for comparison

Compare

You will see a side-by-side comparison of the sections that have changed. This will also indicate whether the instrument list or its content has changed.

COMPARE REVISIONS

The Data Notifications page

When you open a data notification, you can scroll down to see the service package information, for example, PE, PDP and instrument. There are three tabs:

1. Content Added
2. Content Updated
3. Content Removed

The first three columns of data are RIC, PE and PDP. To see all PDP codes, click the **View all PDPs** hyperlink.

A pop-up will display all PDPs for a specific RIC.

Data Notifications classifications guide

About this section

This section will help customers requiring Data Notifications to make the most of the subscription, Excel® download and [MyRefinitiv](#) filters to isolate those changes that are of the most relevance or interest.

Introduction

Each Data Notification is classified across five categories, which constitute:

- Subscription criteria, i.e., for customers to subscribe to and receive emails for a specific subset of Data Notifications
- Search filters in MyRefinitiv
- Filterable categories in the Excel® download feature

The categories that are used in classifying every Data Notification are as follows:

CATEGORY				
Associated products	Content set	Change type	Supplier organisation	Content services

Notifications status definitions

Each notification has a status. The status determines whether an effective date or date range is populated. See the table below to know more about the date status:

Advance Notice (ADV)	Where an effective date is not yet known, an Advance Notice enables us to publish information about an important upcoming change at the earliest possible opportunity, even if details are not yet confirmed. This means the effective date may be provided or it may be blank. This status gives you a clear indication that the information is incomplete but is shared with you for your attention. We will provide more information as it becomes available and update the date type and date as applicable, by publishing a new version of the notification.
Tentative (TEN)	This new date type enables us to provide a date range in cases where the effective date is not yet established. This should reduce the number republished notifications due solely to a change of effective date. We will update the date type and date as applicable, by publishing a new version of the notification.
Effective On	At this stage, there is more certainty of the effective date; the change is planned to take effect on the date specified.
New Status Values	Two new statuses will be displayed on the notification list screen and within the notification details.
On Hold (HOLD)	This indicates that the change has been put on hold, with an explanatory note. Any effective date originally stated will be removed. A new version of the customer notification will be republished with new dates once the reason for the hold has been resolved.
Cancelled (CAN)	If a notification has been cancelled there will be a clear indication of this, accompanied by the reason for cancellation. Cancellation is part of the reissuing process, like any other amendment. It is not possible to cancel a notification without it also being republished to customers.

Reminder: If you do not have access to MyRefinitiv, please **register**. If you are a Refinitiv® Eikon user, you can use your user ID and password to log in.

Definition of categories for Data Notification classification

Associated Products

The list of products presented in the Associated Products category is a subset of all products available from Refinitiv. Since the full list of products is so extensive, the values presented are those deemed most critical following consultation with customers.

The category covers two levels of product definition: the product family name and the specific product name. For example, 'Refinitiv® Datascope Equities' is a specific product that resides within the 'Refinitiv® Enterprise Information' product family.

All impacted products will be displayed in the **Associated Products** list on a Data Notification page.

Content set

The content set category classifies the content change according to its corresponding asset class or content set. Three or more levels of categorisation are available to enable general or very specific selection. For example, customers may subscribe to all Fixed Income content change notifications, or select from one of the more detailed values available, e.g., Convertible.

Change type

Change type describes the type of change that affects the accessibility, availability, display or structure of the content.

More than one change type value can be selected per Data Notification. Continued on the next page.

Change type	Description
Calculation methodology change	A change to the way that an instrument or field values are calculated, e.g., a fixing calculation altered to utilise a different/smaller number of contributors.
Chain/portfolio change	A change being applied at a chain/portfolio level, i.e., Chain RIC/Symbol name changes or Chain/RIC/FID/Portfolio reordering.
Closing run change	A change to the frequency or time when real-time fields/FIDs are cleared down.
Content removal (alternatives available)	Content, e.g., instrument, series, page, which will be removed and has an alternative.
Content removal (no alternatives available)	Content, e.g., instrument, series, page, which will be removed and has no alternative.
Contributor change	A change which involves the addition or removal of a contributor.
Delayed data change	A change to the specification of delayed data, e.g., the time by which real-time data is delayed.
Depth of coverage change	An increase or decrease in the level of coverage provided, e.g., expansion of market depth or historical data coverage.
Display template change	A change to the display template.
Field/FID change	A change to a field or FID or changes to the behaviour of or definition of data within that field or FID.
File code change	A change impacting file codes including RICs moving, new or removed file codes and release time changes.
Index constituent change	Constituents of an Index being altered or a weighting change.
Instrument classification change	A change to instrument classification, e.g., asset class change due to a RECTYPE amendment.
Name change	A change to the name of a billable service.
New market	A new market which has not previously been available.
New policy	The introduction of a new policy, for example, terms and conditions or commercial obligations relating to a service.
New RICs/symbols	New RICs/symbols being introduced. These exclude new tenors added to a pre-existing series which would be deemed as a tenor change.
New series	The introduction of a new series of futures or options.
News change	A change impacting pre-existing news services.
Nonclassified/other change	Only used when the type of change is not covered by those above or below.
Page change	A change being applied at a page level, e.g., instrument/price/field reordering.
Permissioning/entitlement – map collect	A permissioning change where Instruments change permissioning entities but remain in the same product offerings, and the change can be accommodated by the application of a map collect. These include PE changes within existing PDP codes and content moving from a restricted access/fee-liable service to a free-of-fees service.
Permissioning/entitlement – order new service	A permissioning change which may require customers to subscribe to the appropriate PDP/entitlement codes to view the new content. For T1, RFR and/or PRSV updates may be required.
Policy change	A change to the terms and conditions or commercial terms of an existing policy.
Price change	A change to the price a customer pays for a service; this could be a price increase or a price decrease for services which are already billable.
Record template change	A change to the record template.
Reference data change	A change to an instrument's reference data, e.g., expiration dates, SEDOL, ISINs, etc.
RIC/symbol replacement change	A change where a pre-existing RIC/symbol will be replaced by an alternative RIC (not a RIC rename), e.g., a contributed spot RIC being replaced by a composite RIC.
Regulatory change	A change to content – for example its availability, display, meaning – arising from a regulatory change.
RIC/symbol syntax change	A change where the RIC/symbol syntax structure is being amended.
Session time change	A change to a pre-existing market trading schedule, e.g., new phases, changes to existing sessions or DST amendments.
Special trading day	The introduction of a trading day which is not part of a market's usual trading calendar.
Tenor change	A change to RICs/Symbols within a series, e.g., the expansion or removal of instruments within a Money Market/FX Forwards series.

Supplier organisation

The supplier is the provider of the content covered in the notification, which could be Refinitiv or a third party. A third party could typically be an exchange, an interdealer broker, a commercial and retail bank or one of a whole host of other types.

Previously only exchanges were listed by name; non-exchange suppliers were classified as 'Contributed/Third Party'. Now, all suppliers are explicitly listed by name, regardless of type.

Content Services

These are separate orderable third-party 'add-on' content services. A content service is organized according to customer's intended use of the service (Individual, Enterprise or Redistribution use) and further organized by timelines of delivery (Real time or Delayed).

Do you need support?

Please go to myrefinitiv.com and click the **Get Support** button. You can also raise product and content queries from the same page. Select **Get MyRefinitiv Support** if you need help with the portal.
